

DAY - 4

```
lalit@Lalit:~$ minikube ip
The control-plane node minikube host is not running: state=Stopped
To start a cluster, run: "minikube start"
lalit@Lalit:~$ minikube start
minikube v1.35.0 on Ubuntu 22.04 (vbox/amd64)
Using the docker driver based on existing profile
Starting "minikube" primary control-plane node in "minikube" cluster
Pulling base image v0.0.46 ...
Downloading Kubernetes v1.32.0 preload ...
> preloaded-images-k8s-v18-v1...: 333.57 MiB / 333.57 MiB 100.00% 665.37
Restarting existing docker container for "minikube" ...

Docker is nearly out of disk space, which may cause deployments to fail! (94% of capacity). You can pass '--force' to skip this check.
Suggestion:

Try one or more of the following to free up space on the device:

1. Run "docker system prune" to remove unused Docker data (optionally with "-a")
2. Increase the storage allocated to Docker for Desktop by clicking on:
Docker icon > Preferences > Resources > Disk Image Size
3. Run "minikube ssh -- docker system prune" if using the Docker container runtime

Done! kubectl is now configured to use "minikube" cluster and "default" namespace by default
lalit@Lalit:~$ minikube service nginx-login-service --url
http://192.168.67.2:30008
lalit@Lalit:~$
```

```
Done! kubectl is now configured to use "minikube" cluster and "default" namespace by default
lalit@Lalit:~$ minikube service nginx-login-service --url
http://192.168.67.2:30008
lalit@Lalit:~$
```

Command: `minikube service nginx-login-service --url`

The command `minikube service nginx-login-service --url` retrieves and displays the external URL to access the `nginx-login-service` running in your local Minikube Kubernetes cluster.
